Summary

Engineering student who turns business needs into clear requirements and process flows. Worked with SAP and production data during a manufacturing internship, and gathered requirements from 6+ partner venues to shape features for a sports venue platform. Uses Claude and ChatGPT daily to speed up documentation and analysis, and is comfortable with SQL, Excel and Power BI.

Education

Thapar Institute of Engineering and Technology — **Patiala, India**
Bachelor of Engineering in Electronics Engineering (VLSI) — *2023 – 2027*

Experience

Ralson Rubber Pvt. Ltd. — **Ludhiana, India**
Data Systems & Production Intern — *Jun 2025 – Jul 2025*

- Reviewed manufacturing KPIs (output, rejection levels, machine utilization, downtime) using SAP production planning and inventory modules, and flagged recurring process gaps on the shop floor.
- Cross-checked KPI data pulled from multiple internal systems in Excel to test hypotheses on where inefficiencies were coming from.

Rabonna — **Patiala, India**
Founding Member – Product & Business Strategy — *Jan 2025 – Mar 2026*

- Spoke directly with 6+ partner venues to gather requirements, then prioritized features based on user needs, partner asks, and platform constraints.
- Handled product planning across venue discovery, availability, payments, and onboarding, and stayed the point of contact for partner queries as things changed.

Leadership

Institution's Innovation Council, Thapar — **Patiala, India**
Executive Board Member — *Apr 2025 – Apr 2026*

- Helped organize 4 innovation events for 6,000+ participants, coordinating vendors, speakers, marketing activities, and event execution.

Projects

FinOps Copilot – Cloud Cost Forecasting & Anomaly Detection

- Built a forecasting tool using billing data to estimate cloud spending trends and flag unusual cost spikes; created a dashboard to track spending breakdowns and detected anomalies.

Pathfinder – Last-Mile Delivery Decision Intelligence

- Built a decision-support tool to identify delivery-delay risks and suggest dispatch actions using risk scoring, route optimization, and what-if analysis.

FraudLens-AI – Document Intelligence Pipeline

- Built an OCR-based document extraction pipeline to reduce manual review across documents with different layouts and support structured information extraction.

Skills

Business Analysis: Requirements Gathering & Analysis, Process Improvement, Stakeholder Management
Tools: Power BI, Microsoft Excel, JIRA (Basic), SAP
Data: SQL, MySQL, PostgreSQL, Pandas, NumPy
Technical: Python, JavaScript
AI-Assisted Development: ChatGPT, GitHub Copilot, Claude, Prompt Engineering, Code Generation, Code Debugging
Methods: Six Sigma, Forecasting, Anomaly Detection
